NEW BUNN high volume liquid coffee dispenser brings convenience to large volume coffee serving

The LCR-3 HV, BUNN's new high-volume liquid coffee dispenser, brings a new level of ease and convenience to serving large amounts of coffee with easy cost-effective operations, electronic controls, and many other unique features. Its stainless steel outer cabinet allows the unit to easily fit into a commercial kitchen environment.

Minimal operator training is required since the LCR-3 HV can dispense up to three separate types of coffee. The unit can also be set up to yield three separate portions at the push of a button, allowing staff to fill carafes, cambros, or other large servers (up to five gallons or 18.9 litres at a time) effortlessly. In addition, the dispenser's display alerts the operator when concentrate is low or cleaning is needed.

Labor costs are reduced through the optional "auto-switching" mode. This mode allows the operator to choose two pumps to dispense one flavor. When one bag-in-box (BIB) is detected empty, the system automatically switches to a secondary BIB. This eliminates the need to change a BIB during peak demands. There are no filters or grounds to handle, so labor costs are further reduced. In addition, storage costs are reduced since coffee extract requires less storage space than roast ground coffee.

Since only the coffee required is dispensed, the LCR-3 HV eliminates waste, stale or burnt coffee. Product life is extended and degradation reduced through the unit's refrigerated product storage cabinet. Its modular refrigeration element is easy to service and keeps concentrate at a temperature of 41° to 65°F (5° to 18.3°C), although the environment outside the dispenser might reach 95°F (35°C).

Multi-volt design is easily converted to ratings from 120/208 and 120/240 volts (50-60 Hertz) single phase up to a 120/208 three phase.
