

Easy Clear®

HIGH PERFORMANCE WATER CONDITIONING SYSTEMS

Scale-Pro™

Scale-Pro™ Water Quality System

Increase the life of your beverage equipment and prevent costly down time by using the new BUNN Scale-Pro™ Water Treatment System. Proprietary scale inhibitor does not break down at temperatures above 195°F (90.56°C). The system is ideal for most hot water foodservice applications including coffee brewers.

Decrease the lime-scale build-up caused by hard water on sprayheads, tank fittings and water level probes while maintaining brew level consistency and beverage flavor profile.

To enhance Scale-Pro performance and achieve the best tasting beverage, use with a BUNN Easy Clear High Performance Water Conditioning System.*

Water tank without Scale-Pro in use.†

†Performance measured under controlled conditions, individual results will vary based on geographic region and water quality. Test conducted during 3 month period and 2900 brew cycles with two new BUNN CDBCFC brewers with water hardness equaling 28-30 grains. Scale-Pro is a scale inhibitor designed to reduce lime scale build-up and will not remove existing lime.

*Do not combine with filter systems that contain scale inhibition media. Not rated for use with incoming hot water.
